

Internship Task-3:-

This dataset contains these important columns:

OrderID
Date
CustomerID
Product
Quantity
UnitPrice
PaymentMethod
OrderStatus
ItemsInCart
CouponCode
ReferralSource
TotalPrice

Now here is the exact SQL project code according to the task requirements.

Step 1: Create Database

```
CREATE DATABASE ecommerce_analysis;
```

```
USE ecommerce_analysis;
```

Step 2: Create Table

```
CREATE TABLE orders (  
    OrderID VARCHAR(20),  
    Date DATE,  
    CustomerID VARCHAR(20),  
    Product VARCHAR(50),  
    Quantity INT,  
    UnitPrice FLOAT,  
    ShippingAddress VARCHAR(100),  
    PaymentMethod VARCHAR(50),  
    OrderStatus VARCHAR(50),  
    TrackingNumber VARCHAR(50),  
    ItemsInCart INT,  
    CouponCode VARCHAR(50),  
    ReferralSource VARCHAR(50),  
    TotalPrice FLOAT  
);
```

Step 3: Import CSV File

In MySQL Workbench:

Server → Table Data Import Wizard

Choose your CSV file and import into orders table.

Step 4: SQL Queries for Project

These queries directly match your project requirements.

1. View Entire Dataset

```
SELECT * FROM orders;
```

Expected Output

Displays all 1200 rows and 14 columns from dataset.

2. Total Number of Orders

```
SELECT COUNT(*) AS Total_Orders  
FROM orders;
```

Expected Output

Total_Orders

1200

3. Total Revenue Generated

```
SELECT SUM(TotalPrice) AS Total_Revenue  
FROM orders;
```

Expected Output

Total_Revenue

1264761.96

4. Average Order Value

```
SELECT AVG(TotalPrice) AS Average_Order_Value  
FROM orders;
```

Expected Output

Average_Order_Value

1053.97

5. Orders with TotalPrice Greater Than 2000

```
SELECT OrderID, Product, TotalPrice
FROM orders
WHERE TotalPrice > 2000;
```

Expected Output

Displays high-value orders above ₹2000.

Example:

OrderID	Product	TotalPrice
ORD200000	Monitor	2853.10

6. Sort Products by Highest Revenue

```
SELECT Product, SUM(TotalPrice) AS Revenue
FROM orders
GROUP BY Product
ORDER BY Revenue DESC;
```

Expected Output

Product	Revenue
Chair	195620.11
Printer	195612.61
Laptop	192126.56

7. Average Quantity Sold per Product

```
SELECT Product, AVG(Quantity) AS Avg_Quantity
FROM orders
GROUP BY Product;
```

Expected Output

Shows average quantity ordered for each product.

8. Count Orders by Status

```
SELECT OrderStatus, COUNT(*) AS Total_Orders
FROM orders
GROUP BY OrderStatus;
```

Expected Output

OrderStatus Total_Orders

Cancelled	250
Returned	247
Pending	237
Shipped	235
Delivered	231

9. Payment Method Analysis

```
SELECT PaymentMethod, COUNT(*) AS Usage_Count
FROM orders
GROUP BY PaymentMethod
ORDER BY Usage_Count DESC;
```

Expected Output

Shows most used payment methods.

10. Top 5 Most Expensive Orders

```
SELECT OrderID, Product, TotalPrice
FROM orders
ORDER BY TotalPrice DESC
LIMIT 5;
```

Expected Output

Displays top 5 highest-priced orders.

11. Revenue by Referral Source

```
SELECT ReferralSource, SUM(TotalPrice) AS Revenue
FROM orders
GROUP BY ReferralSource
ORDER BY Revenue DESC;
```

Expected Output

Shows which marketing source generated highest revenue.

12. Coupon Usage Analysis

```
SELECT CouponCode, COUNT(*) AS Times_Used  
FROM orders  
GROUP BY CouponCode;
```

Expected Output

Displays usage count of coupon codes.

Final Insights for the Report

- Total orders analyzed: 1200
 - Total revenue generated: ₹12,64,761.96
 - Average order value: ₹1053.97
 - Chair and Printer generated highest revenue
 - Cancelled orders were slightly higher than delivered orders
 - Payment methods and referral sources affected sales trends
-
